

It's What's Inside That Makes The Difference!

GLUCOSE MANAGEMENT TRIPACK™

Information and Instructions

Glucose Management Tripack (GMS III), consisting of **Glucoten AF, Glucose Balance AF and Diabal AF**, is designed to restore pancreatic function and to proliferate insulin beta cells. GMS II has been shown to gradually and effectively lower blood-sugar levels and increase insulin secretion. In addition it has been shown to regulate carbohydrate metabolism and increase immune response.

People with Type II diabetes either don't produce enough insulin to control glucose levels or their cells simply do not respond to the insulin. If the pancreas produces some insulin, the production level is often not sufficient to lower the blood glucose level to normal. The main problem is that for some reason, insulin does not work properly after it reaches the body's cells. This is called "insulin resistance". Insulin resistance can happen if you are overweight. This can happen if you are overweight because fat "blocks" the insulin from moving the glucose into the body cells.

Geromatrix® GMS III stimulates the insulin receptors of the cells to allow for the uptake of glucose. This action produces a reduction of glucose in a natural way as the cells convert it into usable energy. It breaks the insulin-resistance syndrome by stimulating and opening the peripheral insulin receptor in each cell, thereby allowing the body's own insulin to enter the cells and start working again. It also stimulates the pancreas to release more insulin, and reduces the absorption of glycosides at the intestinal level.

GMS III does not mask the symptoms of diabetes; it works with your own system to bring an improvement in a natural way. These unique herbs break the insulin resistance syndrome and provide a safer, easier way to help normalize blood sugar without the harmful side effects of various drugs and pharmaceuticals. GMS III works hand-in-hand with a healthy diet such as the Mediterranean Diet.

Capsule Count: 120 Vegetarian Capsules tablets:

Take 2 capsules each of Glucoten AF, Glucose Balance AF and Diabal AF after each meal to regulate blood sugar from food.

It is also recommended that you take 2 capsules of each Glucoten AF, Glucose Balance AF and Diabal AF at bedtime.

(* = add or subtract as needed)

NOTICES: As with all blood sugar issues, it is extremely important to monitor ones blood sugar on a daily basis. As with all herbal remedies, it is important to take the product on a regular basis for a minimum of 90 days to see the maximum effects of the formulation.
